About Order Interface

The PTS Order Interface API is a means to automate the collection of order information in PTS which can then be used when creating PTS records and labels.

The PTS Order Interface enables you to interface order data directly from many order processing applications and automatically print PTS labels without manually accessing the PTS Web Application.

Interfacing order data will allow for quicker creation of PTS labels and associated digital records, eliminating the need for dual entry. This also ensures that PTS data is complete and accurate.

Enrollment for the Order Interface Program

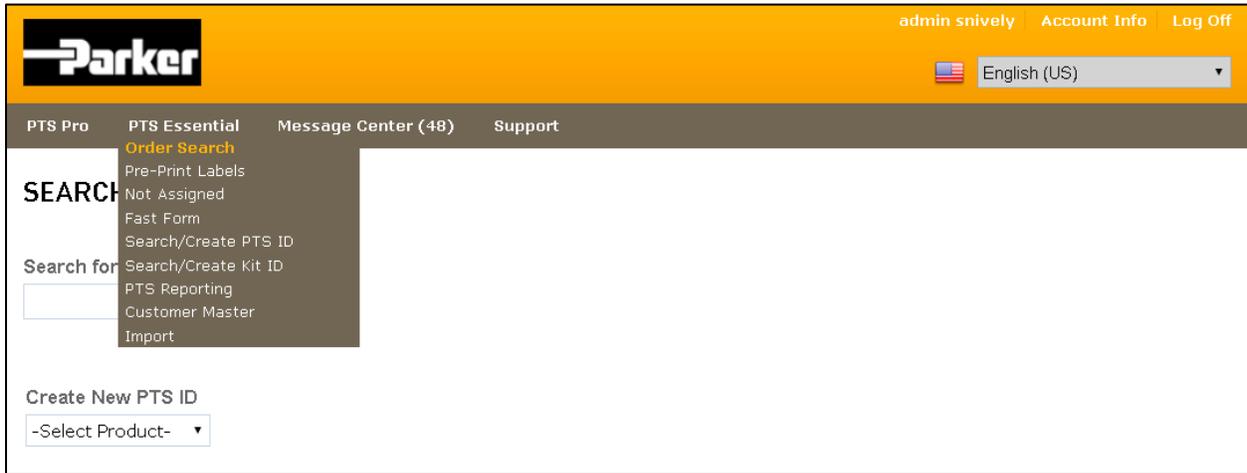

Contact the PTS Support Center to request assistance with the Order Data Interface enrollment and process.

E-mail the Support Center with the description “**PTS Order Interface Enrollment Request**”. Including your contact information. A support ticket will automatically be created and routed to the appropriate resource.

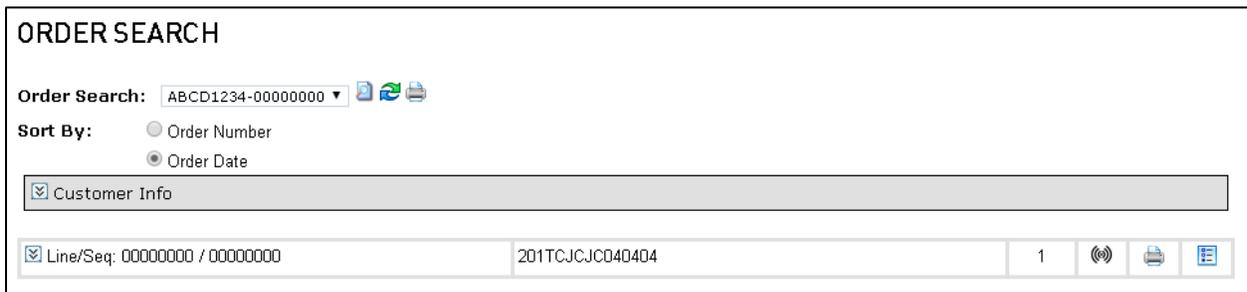

Support Center Email: support@parkertracking.atlassian.net

1: User Interface (optional)

To navigate, first log into the Parker Tracking System (PTS) at www.parker.com/pts and select **Order Search** from the PTS Essential drop down.

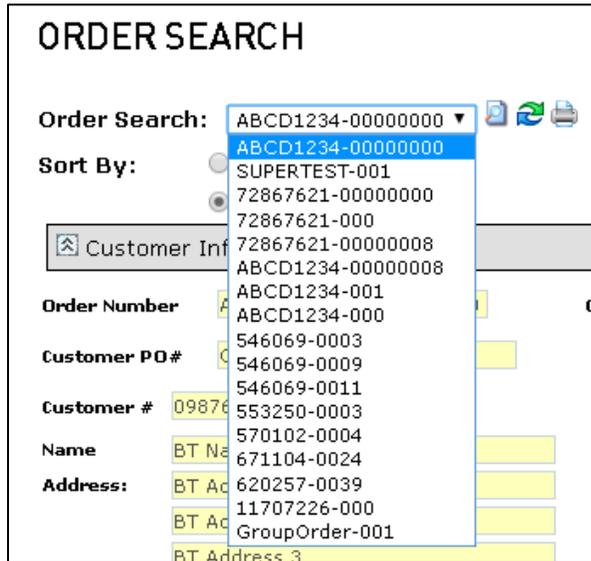

1.1: Main Screen

The Order Interface UI screen is used to print order labels. This can be done at the order level or line level.

1.2: Dropdown & Scan mode

a. Dropdown Mode

ORDER SEARCH

Order Search: ABCD1234-00000000

Sort By: SUPERTEST-001
 72867621-00000000
 72867621-000

Customer Info: [Customer Info]

Order Number: [Order Number]

Customer PO #: [Customer PO #]

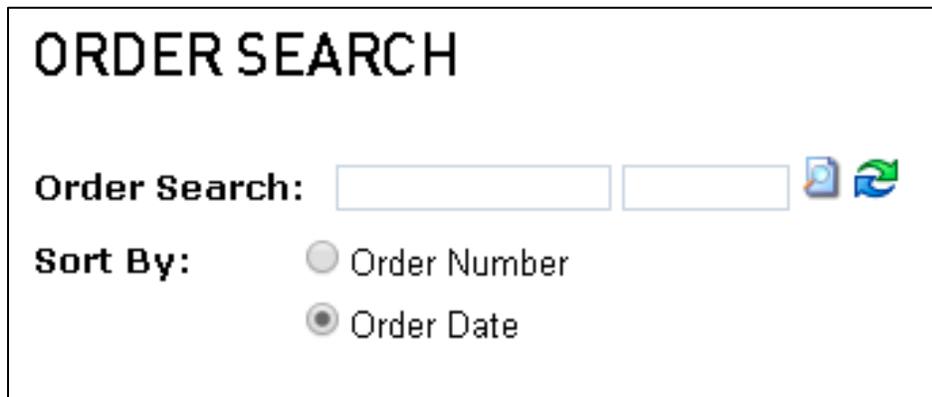

Customer #: [Customer #]

Name: [Name]

Address: [Address]

Set by PTS Team or account admin, this allows the user to see all orders in a dropdown format for order selection.

b. Scan Mode

ORDER SEARCH

Order Search: [] []

Sort By: Order Number
 Order Date

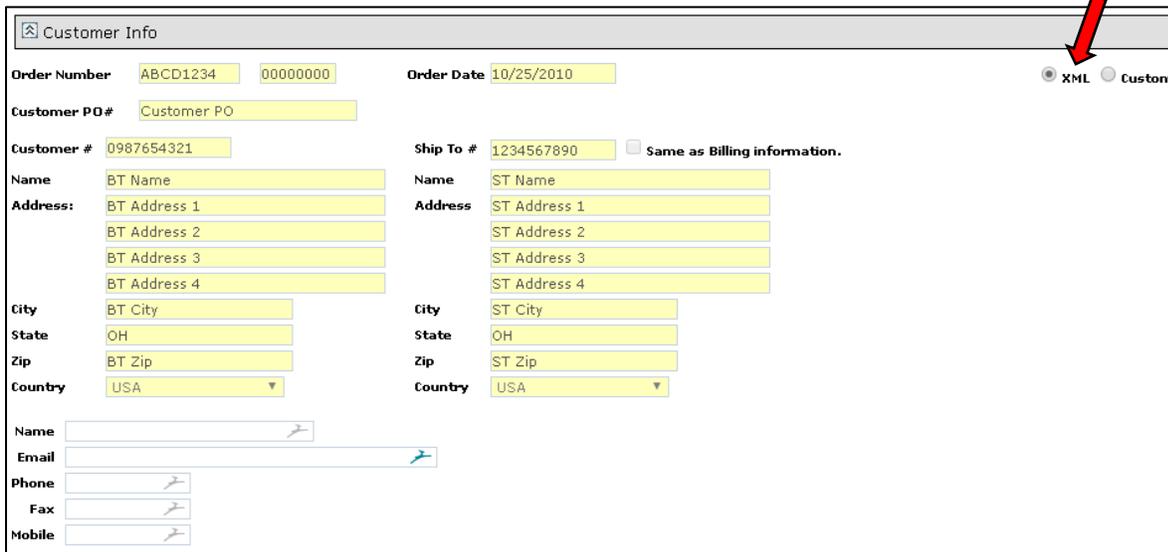

Set by PTS Team or account admin, this allows a user to enter order information directly for lookup. This is most useful for users who use barcode scanners.

i Users that would like to program barcode scanners, please use the logic below:

Scan (parse order) -> Tab -> parse release -> Enter

1.3: Customer Information

a. XML

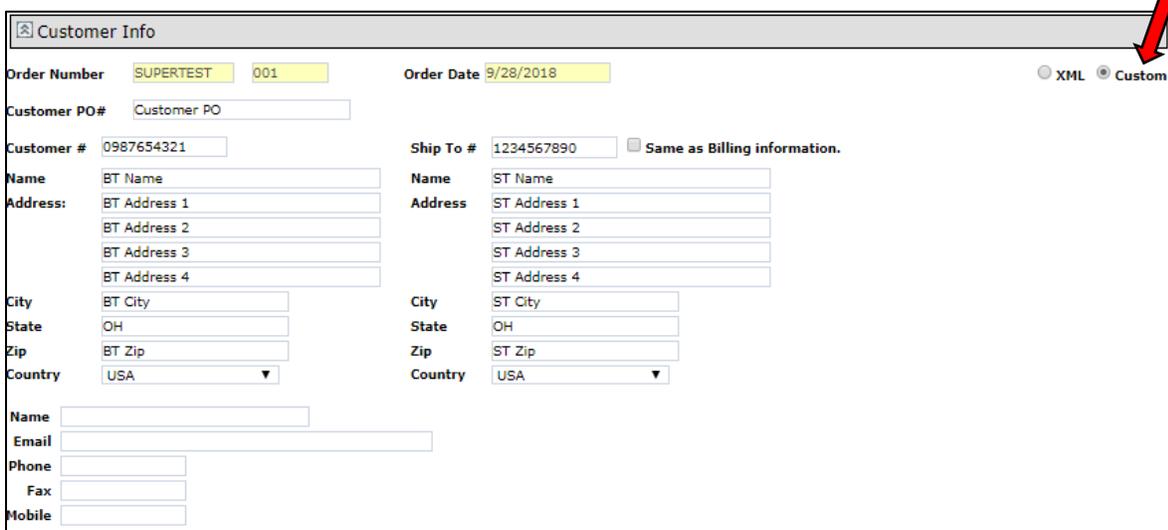

The screenshot shows the 'Customer Info' form with the 'XML' radio button selected. A red arrow points to the 'XML' option. The form contains the following data:

Order Number	ABCD1234	00000000	Order Date	10/25/2010	<input checked="" type="radio"/> XML <input type="radio"/> Custom
Customer PO#	Customer PO				
Customer #	0987654321	Ship To #	1234567890	<input type="checkbox"/> Same as Billing information.	
Name	BT Name	Name	ST Name		
Address:	BT Address 1	Address	ST Address 1		
	BT Address 2		ST Address 2		
	BT Address 3		ST Address 3		
	BT Address 4		ST Address 4		
City	BT City	City	ST City		
State	OH	State	OH		
Zip	BT Zip	Zip	ST Zip		
Country	USA	Country	USA		
Name	<input type="text"/>				
Email	<input type="text"/>				
Phone	<input type="text"/>				
Fax	<input type="text"/>				
Mobile	<input type="text"/>				

Customer information cannot be manipulated when the **XML** option is selected. Data that appears in the system reflects the information that is interfaced within the order.

b. Custom

The screenshot shows the 'Customer Info' form with the 'Custom' radio button selected. A red arrow points to the 'Custom' option. The form contains the following data:

Order Number	SUPERTEST	001	Order Date	9/28/2018	<input type="radio"/> XML <input checked="" type="radio"/> Custom
Customer PO#	Customer PO				
Customer #	0987654321	Ship To #	1234567890	<input type="checkbox"/> Same as Billing information.	
Name	BT Name	Name	ST Name		
Address:	BT Address 1	Address	ST Address 1		
	BT Address 2		ST Address 2		
	BT Address 3		ST Address 3		
	BT Address 4		ST Address 4		
City	BT City	City	ST City		
State	OH	State	OH		
Zip	BT Zip	Zip	ST Zip		
Country	USA	Country	USA		
Name	<input type="text"/>				
Email	<input type="text"/>				
Phone	<input type="text"/>				
Fax	<input type="text"/>				
Mobile	<input type="text"/>				

Customer data can be manipulated when the **Custom** option is selected. This gives the user the ability to overwrite data if details are incorrect or have changed.

1.4: Line Item Details & Line Details

a. Line Item Details

1. Hose

<input type="checkbox"/> Line/Seq: 001 / 001					201TCJCJC040404					1

Printer 2 (8") Label Format:

i. Start & End

- Order print has the option to print all line items—it defaults from the first line item to the last. The user can edit it and specify the exact range of line items the user needs.

ii. Duplicates Required

- Selecting the **Duplicates Required** option forces the printer to produce a duplicate of every PTS ID printed. Duplicates are decided by Length/OD settings in the **Account Info**. Checking these boxes will create a duplicate for each tag.

iii. Label

- There are up to three custom data fields, which will populate on the label.

iv. Asset Management

- Provides the ability to set **Inspection Cycle**, **Replacement Cycle**, **Inspection Templates** and **Criticality** at print.

v. Attach PTS ID list to batch print

- The **Attach PTS ID List to Batch Print** checkbox will generate an Excel document of all the PTS IDs generated and attach it to each PTS ID.

i. Quantity

- This value is set in the XML and not changeable without re-interfacing the XML.

ii. Duplicates

- Allows the user to generate duplicate labels. (ie. Quantity of 3 with Duplicates 2 will produce 6 labels)

iii. Attach PTS ID List to Batch Print

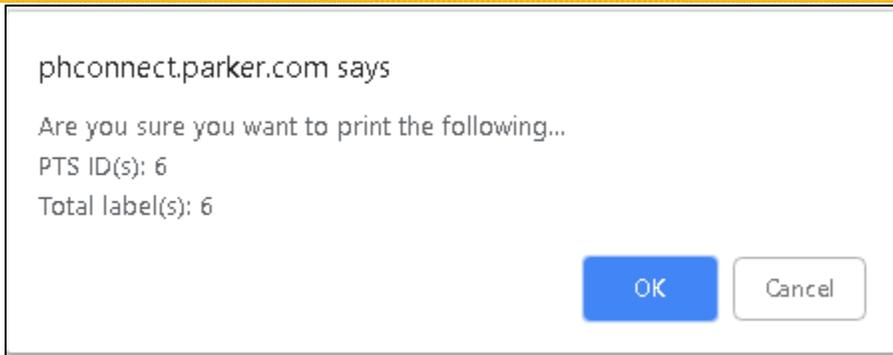

- An Excel document is generated of all the PTS IDs printed and attached to each PTS ID.

iv. Label

- There are up to three custom data fields, which will populate on the label.

v. Asset Management

- Provides the ability to set **Inspection Cycle**, **Replacement Cycle**, **Inspection Templates** and **Criticality** at print.

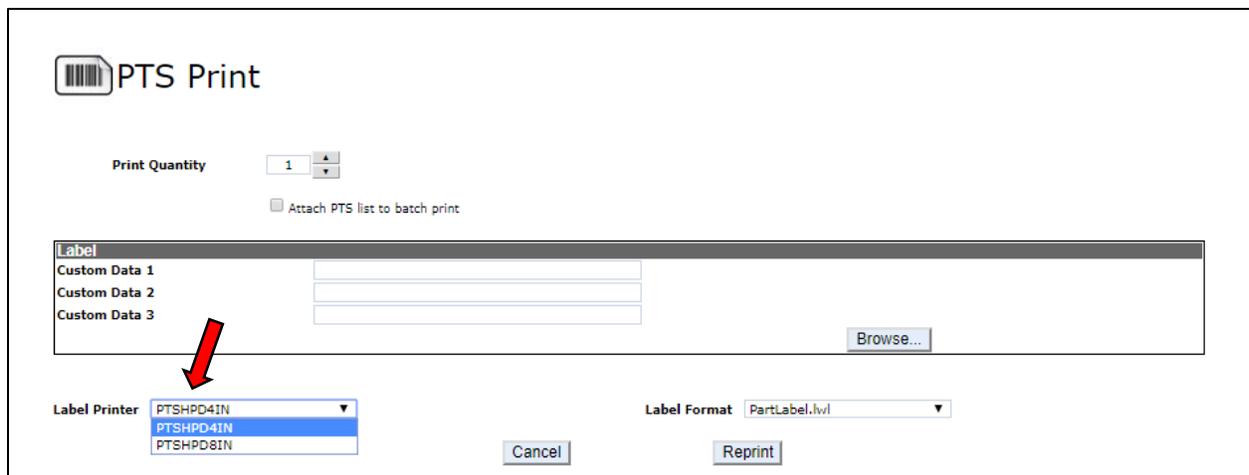

i This functionality is enabled by PTS Team

b. Hose Only

i. 4" and 8" Printer Selection

- If an account has a 4" and 8" printer setup, the application will automatically send hoses with a series of 10 and lower to 4". Anything greater than 10 will go the 8 series.

ii. Duplicates based on OD

- The application can be configured to automatically print an extra label based on and OD configuration. This is set up in **Account Info**.

2: Technical

PTS uses an XML web service to receive order information into our system.

For systems already integrated, please reference **Appendix 1** at the end of this document.

For systems not already integrated, please review the information below to configure.

2.1: Hose

a. Data Requirements

The Order Interface has multiple components that make up a complete interface transaction.

- **Order - Order Header Information**
 - Order #, Sold-To, Ship-To, Address, and other contact information.
- **OrderLine - Individual Order Line Items**
 - Quantity, Part Number, Customer Part Number, Unit of Measurement, etc.
- **OrderLineBOM – Line Item Bill of Material.**
 - Individual Components, Length, Quantity, Unit of Measurement, etc....
- **OrderLineComments – Line Item Comments** *Optional
 - Comments
- **OrderLineAlt Data – Line Item Competitor/Alternate Data** *Optional
- **OrderLineAltBOM – Line Item Competitor/Alternate Bill of Materials**
*Optional
- **OrderLineAppData – Line Item Application Data** *Optional
 - Location, VIN, etc.

- **OrderLineDynamicApp Data – Line Item Dynamic Application Data**
 - *Optional
 - Dynamic data by setup

- **OrderLinePTSInbound – Replaced PTS IDs** *Optional
 - PTS IDs
 - Replacement Reasons
 - Url Attachments (URL, LinkText, Public/Private)

b. Order Header (PTSOrderImport)

An Order has specific fields associated with it and must be setup in the correct order. The fields are listed below.

Field Name	Type	Max Length/Value	Optional	Additional Comments
DataSource	String	10		Character Value assigned by Parker
AccountCode	String	15		Distributor's Parker Account Code
OrderNumber	String	25		
OrderReleaseNumber	String	3		Import will pad with zeros
Status	String	1		C=Create, A=Assign, U=Update, X= XML
CustomerNumber	String	25		
ShipToNumber	String	25		
CustomerPO	String	20		
BillToName	String	30		
BillToAddress1	String	30		
BillToAddress2	String	30		
BillToAddress3	String	30		
BillToAddress4	String	30		
BillToCity	String	20		
BillToState	String	12		
BillToZip	String	10		
BillToCountry	String	20		
ShipToName	String	30		

ShipToAddress1	String	30		
ShipToAddress2	String	30		
ShipToAddress3	String	30		
ShipToAddress4	String	30		
ShipToCity	String	20		
ShipToState	String	12		
ShipToZip	String	10		
ShipToCountry	String	20		
AutoPrint	Boolean	5	Yes	true = Auto Print PTS Labels false = Manually Print PTS Labels
Response	Boolean	5	Yes	true = Respond with generated PTS IDs false = No Response
Printer	String	20	Yes	

- **Additional Notes**

- **AutoPrint**

- The AutoPrint function will automatically print all PTS IDs sent. The user will not need to go to the Order Search UI to print.
 - The printer will be selected by the following logic
 1. Account defaults to the 4" printer.
 2. If there's an 8" printer, it will perform logic to determine which printer to use based on Outer Diameter (OD). 10 OD and lower series goes to the 4" printer, 11 OD and higher goes to the 8" printer)
 3. If **OrderLine Print Account** is specified it will override the current account's printers with the specified account, then performs steps 1 and 2 above.
 4. If Orderline Printer is specified, it will override the logic in steps 1-3 and use the specified printer alias.

- **Response**

- The Response function will only work if AutoPrint is true. For each OrderLine it will generate a PTSPorderLineOutbound XML. For multiple orderline orders you will receive 1 PTSPorderLineOutbound per line item.

- Example:

```

<PTSPorderLineOutbound>
  <OrderNumber>XXXX</OrderNumber>
  <OrderReleaseNumber>XXXX</OrderReleaseNumber>
  <OrderLineNumber>XXXX</OrderLineNumber>
  <OrderLineSeqNumber>XXXX</OrderLineSeqNumber>
  <OutboundPTSIDs>
    <PTSID>XXXX</PTSID>
    <PTSID>XXXX</PTSID>
    <PTSID>XXXX</PTSID>
  </OutboundPTSIDs>
</PTSPorderLineOutbound>

```

c. Order Line

An OrderLine has specific fields associated with it and must be setup in the correct order. These are the individual Line items for the order that will be available for printing.

The fields are listed below.

<u>Field Name</u>	<u>Type</u>	<u>Max Length/Value</u>	<u>Optional</u>	<u>Additional Comments</u>
OrderNumber	String	25		
OrderReleaseNumber	String	3		Import will pad with zeros
OrderLineNumber	String	4		Numeric, Padded with zeros
OrderLineSeqNumber	String	4		Numeric, padded with zeros Beginning with 0001
PartNumber	String	50		
AlternatePartNumber	String	35		

Product	String	25		
ProductModifier	String	35		
Quantity	Int	9,0		
LabelCopies	Int	9,0		
CustomData1	String	35		If blank, import will pull from account settings.
CustomData2	String	35		If blank, import will pull from account settings.
CustomData3	String	35		If blank, import will pull from account settings.

- **Additional Notes**

- **Print Logic**

- Account defaults to the 4" printer.
- If there's an 8" printer, it will perform logic to determine which printer to use based on Outer Diameter (OD). 10 OD and lower series goes to the 4" printer, 11 OD and higher goes to the 8" printer)
- If **OrderLine Print Account** is specified it will override the current account's printers with the specified account, then performs steps 1 and 2 above.
- If Orderline Printer is specified, it will override the logic in steps 1-3 and use the specified printer alias.

d. Order Line BOM

An OrderLineBOM has specific fields associated with it and must be setup in the correct order. These are the individual components that comprise the order line item part.

The fields are listed below.

<u>Field Name</u>	<u>Type</u>	<u>Max Length/Value</u>	<u>Optional</u>	<u>Additional Comments</u>
OrderNumber	String	25		
OrderReleaseNumber	String	3		Import will pad with zeroes

OrderLineNumber	String	4		Numeric, padded with zeros
OrderLineSeqNumber	String	4		Numeric, padded with zeros Beginning with 0001
ComponentSeqNumber	String	4		Numeric, padded with zeros
ComponentPart	String	35		
Quantity	Int	9,0		
UOM	String	2		"In", "mm", "pc" or ""
SubPTSID	String	8		
ReplaceDate	Date	10		CCYY-MM-DD
QCCCode	String	50		

e: Order Line Comments

An OrderLineComments has specific fields associated with it and must be setup in the correct order. These are additional instructions or comments for the individual line item.

The fields are listed below.

<u>Field Name</u>	<u>Type</u>	<u>Max Length/Value</u>	<u>Optional</u>	<u>Additional Comments</u>
OrderNumber	String	25		
OrderReleaseNumber	String	3		Import will pad with zeros
OrderLineNumber	String	4		Numeric, padded with zeros
OrderLineSeqNumber	String	4		Numeric, padded with zeros, beginning with 0001
CommentSeqNumber	String	4		Numeric, padded with zeroes
Comment	String	250		Import will parse this into individual comments in PTS

 *This section is not required*

f: Order Line PTS Inbound

An OrderLinePTSInbound has specific fields associated with it and must be setup in the correct order. These are additional instructions or comments for the individual line item. The following fields are listed below.

Field Name	Type	Max Length (Value)	Optional	Comments
OrderNumber	String	25		
OrderReleaseNumber	String	8		
OrderLineNumber	String	8		
OrderLineNumberSeq	String	8		Padded with zeroes (3) 1 will be 0001
PTSID	String	8		Used for Replacement, PTS ID must be a valid Non-Preprinted, Non-Replaced PTS ID
ReplacementReason	String	50	Yes	
URLAttachments			Yes	SubSection Inside of OrderLineInbounds Repeat URL fields for each attachment
URL	String	1000	Yes	Must start with "http:\\\" or "https:\\\"
LinkText	String	500	Yes	
isPublic	String	5 (true or false)	Yes	Sets the attachment to be public or private

- **Additional Notes**

- This section is only needed if performing a replace, or adding URL based attachments to the PTS ID. If neither of these are occurring the section can be removed.

- **Replace**

- The PTSID is must be a NonPreprint and NonReplaced Tag. Replacement reason is optional.

- **URL Attachments**

- This section is not required. For multiple attachments, there needs to be multiple instances of the URL Attachments inside of the Inbound.

- Example:

```
<OrderLinePTSInbound>
  <OrderNumber>1549246</OrderNumber>
  <OrderReleaseNumber>001</OrderReleaseNumber>
  <OrderLineNumber>001</OrderLineNumber>
  <OrderLineSeqNumber>001</OrderLineSeqNumber>
  <PTSID></PTSID>
  <URLAttachments>
    <URL>http://www.google.com</URL>
    <LinkText>GOOGLE</LinkText>
    <IsPublic>true</IsPublic>
  <URLAttachments>
  <URLAttachments>
    <URL>http://www.yahoo.com</URL>
    <LinkText>yahoo</LinkText>
    <IsPublic>true</IsPublic>
  <URLAttachments>
</OrderLinePTSInbound>
```

g. XML Schema

1. Inbound

The following is the schema for the Hose Interface service.

http://phconnect.parker.com/pts_e/OrderInterface/PTSOrderInterface.xsd

```
<?xml version="1.0" encoding="UTF-8"?>
<xsd:schema xmlns:xsd="http://www.w3.org/2001/XMLSchema" id="PTSOrderInterface"
elementFormDefault="qualified">

</xsd:element>
</xsd:sequence>
</xsd:complexType>
</xsd:element>
</xsd:schema>

```

- **Additional Notes**

- This XML Schema is subject to change (The PTS team intends to limit the number of changes to the XML schema, however, future enhancements may require changes.)
- There can be multiple OrderLines in an order
- There can be multiple OrderLineBOM in an OrderLine
- There can be multiple OrderLineComments in an OrderLine.
- For orders where a line item is for a KIT, the sequence (seq.) can be used for multiple items with single line item.

2. Outbound

The following is an example Schema that will be replayed as a parameter from the web service. This replay is only sent if the Auto Print & Response values in the Order

Header must both be set to true. The outbound transaction will includes all PTS ID's generated by the auto-print function.

```

<?xml version="1.0" encoding="UTF-8"?>
<xsd:schema xmlns:xsd="http://www.w3.org/2001/XMLSchema" id="PTSAutoPrintResponse"
elementFormDefault="qualified">
  <!--

                </xsd:complexType>
              </xsd:element>
            </xsd:sequence>
          </xsd:complexType>
        </xsd:element>
      </xsd:sequence>
    </xsd:complexType>
  </xsd:element>
</xsd:schema>

```

• Additional Notes

- Typically, orders are sent one at a time, however multiple OrderLines can be sent in an order
- Example:

```

<PTSAutoPrintResponse>
  <DataSource>TESTING</DataSource>
  <AccountCode>999999</AccountCode>
  <OrderNumber>ABCD1234</OrderNumber>
  <OrderReleaseNumber>001</OrderReleaseNumber>
  <CustomerNumber>0987654321</CustomerNumber>
  <ShipToNumber>1234567890</ShipToNumber>

```

Start of Order

```
<BillToName>BT Name</BillToName>
<BillToAddress1>BT Address 1</BillToAddress1>
<BillToAddress2>BT Address 2</BillToAddress2>
<BillToAddress3>BT Address 3</BillToAddress3>

h: Test Web Service Page

1. Production Environment:

http://www.phconnect.com/pts_e/OrderInterface/TestWebService.aspx

2. Testing and Training Environment:

http://phctest.parker.corp/pts_e/OrderInterface/TestWebService.aspx

http://phctest.parker.com/pts_e/OrderInterface/TestWebService.aspx

• Additional Notes

- The TestWebService page is designed to give the developer the means in which to test their formatted xml interface data.

ENGINEERING YOUR SUCCESS.

- By selecting Method 1 (Original) and clicking Submit XML it will submit your current string, or if the page is blank it will generate a sample string for testing.
- The testing process will require a valid <DataSource> value (*TESTING*) and valid <AccountCode>.

<p>Web Service Input (xml):</p>	<p>Web Service Input (xml):</p> <pre><?xml version='1.0' encoding='utf-8'> <OrderImport> <DataSource>TESTING</DataSource> <AccountCode>999999</AccountCode> <OrderNumber>ABCD1234</OrderNumber> <OrderReleaseNumber>001</OrderReleaseNumber> <CustomerNumber>0987654321</CustomerNumber> <ShipToNumber>1234567890</ShipToNumber> <BillToName>BT Name</BillToName> <BillToAddress1>BT Address 1</BillToAddress1> <BillToAddress2>BT Address 2</BillToAddress2> <BillToAddress3>BT Address 3</BillToAddress3> <BillToAddress4>BT Address 4</BillToAddress4> <BillToCity>BT City</BillToCity> <BillToState>OH</BillToState> <BillToZip>BT Zip</BillToZip> <BillToCountry>USA</BillToCountry> <ShipToName>ST Name</ShipToName> <ShipToAddress1>ST Address 1</ShipToAddress1> <ShipToAddress2>ST Address 2</ShipToAddress2> <ShipToAddress3>ST Address 3</ShipToAddress3> <ShipToAddress4>ST Address 4</ShipToAddress4> <ShipToCity>ST City</ShipToCity> <ShipToState>OH</ShipToState> </OrderImport></pre>

XMLOrderInterface

Click [here](#) for a complete list of operations.

OrderInterface

PTS Order Interface

Test

To test the operation using the HTTP POST protocol, click the 'Invoke' button.

Parameter	Value
xmlstr:	<input type="text"/>

SOAP 1.1

The following is a sample SOAP 1.1 request and response. The [placeholders](#) shown need to be replaced with actual values.

```
POST /pts_e/OrderInterface/XMLOrderInterface.asmx HTTP/1.1
Host: www.phconnect.com
Content-Type: text/xml; charset=utf-8
Content-Length: length
SOAPAction: "http://phconnect.parker.com/pts_e/ParkerPTSWeb/OrderInterface/OrderInterface"

<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:soap=
  <soap:Body>
    <OrderInterface xmlns="http://phconnect.parker.com/pts_e/ParkerPTSWeb/OrderInterface/">
      <xmlstr>string</xmlstr>
    </OrderInterface>
  </soap:Body>
</soap:Envelope>

HTTP/1.1 200 OK
```

2.2: General (non-hose)

a. Data Requirements

The Order Interface has multiple components that make up a complete interface transaction.

- **Order** - Order Header Information
 - Order #, Sold-To, Ship-To, Address, and other contact information.
- **OrderLine** - Individual Order Line Items
 - Quantity, Part Number, Customer Part Number, Unit of Measurement, etc.
- **OrderLineBOM** – Line Item Bill of Material.
 - Individual Components, Length, Quantity, Unit of Measurement, etc....
- **OrderLineComments** – Line Item Comments *Optional
- **OrderLineAlt Data** – Line Item Competitor/Alternate Data *Optional
- **OrderLineAltBOM** – Line Item Competitor/Alternate Bill of Materials *Optional
- **OrderLineAppData** – Line Item Application Data *Optional
 - Location, VIN, etc.
- **OrderLineDynamicApp Data** – Line Item Dynamic Application Data *Optional
 - Dynamic data by setup
- **OrderLinePTSInbound** – Replaced PTS IDs *Optional
 - Assign, Update, Replace PTS IDs
 - MfgDate, SerialNumber, Warranty Information
 - Url Attachments (URL, LinkText, Public/Private)

b. Order Header (PTOrderImport)

An Order has specific fields associated with it and must be setup in the correct order. The fields are listed below.

Field Name	Type	Max Length (Value)	Optional	Comments
DataSource	String	10		Character value assigned by Parker
AccountCode	String	15		Distributor's Parker Account Code
OrderNumber	String	25		
OrderReleaseNumber	String	8		
Status	String	1		C=Create, A=Assign, U=Update,X=XML (More Information below)
CustomerNumber	String	25	Yes	
ShipToNumber	String	25	Yes	
CustomerPO	String	20	Yes	
BillToName	String	30	Yes	
BillToAddress1	String	30	Yes	
BillToAddress2	String	30	Yes	
BillToAddress3	String	30	Yes	
BillToAddress4	String	30	Yes	
BillToCity	String	20	Yes	
BillToState	String	12	Yes	
BillToZip	String	10	Yes	
BillToCountry	String	20	Yes	
ShipToName	String	30	Yes	
ShipToAddress1	String	30	Yes	
ShipToAddress2	String	30	Yes	
ShipToAddress3	String	30	Yes	
ShipToAddress4	String	30	Yes	
ShipToCity	String	20	Yes	
ShipToState	String	12	Yes	
ShipToZip	String	10	Yes	
ShipToCountry	String	20	Yes	
AutoPrint	Boolean	5	Yes	true = Auto print PTS Labels false = Manual Print PTS Labels via Order Search

				(More Information Below)
Response	Boolean	5	Yes	*Only works when AutoPrint is true* true = Respond with generated PTS IDs false = No Response (More Information Below)
Printer	String	20	Yes	Specific Print

- **Additional Notes**

- **Status**

1. A= Assign

- Assign is used for preprint assigning. For each OrderLine the quantity must match the number of PTSOrderLineInbounds. The PTS ID in the inbound must be preprinted. Once the order is received, it will automatically process and require no user interaction.

2. C= Create

- Create is used to create a new PTS ID. Once the order is received, the PTS ID will be generated. With the response flag enabled it will return the tag. Otherwise it will create the PTS ID and not return it back.

3. U= Update

- Update Is used to update a PTS ID. For each OrderLine the quantity must match the number of PTSOrderLineInbounds. The PTS ID in the inbound must be a standard (not preprinted or replaced). Once the order is received, it will automatically process and require no user interaction.

4. X= XML

- XML will store the file for seven days (can be increased upon request) for the user to print later using the Order Search UI.

- **AutoPrint**

- The AutoPrint function will automatically generate all PTS IDs sent.
- The printer will be selected by the following logic:
 - If a printer is specified in the Printer Field at the Order Level it will use it.
 - If a printer is not specified in the Printer field at the order level it will pull the printer from the general section of Account Info.

- **Response**

- The Response function will only work if Response is true. For each OrderLine it will generate a PTSOrderLineOutbound XML. For multiple orderline orders you will receive 1 PTSOrderLineOutbound per line item.
- **Example:**

```
<PTSOrderLineOutbound>
  <OrderNumber>XXXX</OrderNumber>
  <OrderReleaseNumber>XXXX</OrderReleaseNumber>
  <OrderLineNumber>XXXX</OrderLineNumber>
  <OrderLineSeqNumber>XXXX</OrderLineSeqNumber>
  <OutboundPTSIDs>
    <PTSID>XXXX</PTSID>
    <PTSID>XXXX</PTSID>
    <PTSID>XXXX</PTSID>
  </OutboundPTSIDs>
</PTSOrderLineOutbound>
```

c. Order Line

An OrderLine has specific fields associated with it and must be setup in the correct order. These are the individual Line items for the order that will be available for printing.

The fields are listed below.

Field Name	Type	Max Length (Value)	Optional	Comments
OrderNumber	String	25		
OrderReleaseNumber	String	8		
OrderLineNumber	String	8		
OrderLineSeqNumber	String	8		
PartNumber	String	50		
AlternatePartNumber	String	35	Yes	
Product	String	25		Listed as optional but is a required field and will return an error if product does not match approved list. (More Information below)
ProductModifier	String	35	Yes	No longer used
Quantity	Integer			
ModelNumber	String	35	Yes	If no value is provided the Non-Hose screen will pull the model number from the database, this is an override. Once supplied it will not pull from the database for this field.
LabelCopies	Integer		Yes	Sends this value to software to create a copy of all PTS IDs created for this order.
CustomData1	String	35	Yes	If no value is provided, the account custom data is used. If no Account custom data is used, the value will be empty. *Account Custom data will also use the Custom Data Prefix*
CustomData2	String	35	Yes	If no value is provided, the account custom data is used.

				<p>If no Account custom data is used, the value will be empty.</p> <p>*Account Custom data will also use the Custom Data Prefix*</p>
CustomData3	String	35	Yes	<p>If no value is provided, the account custom data is used.</p> <p>If no Account custom data is used, the value will be empty.</p> <p>*Account Custom data will also use the Custom Data Prefix*</p>

- **Additional Notes**

- **Products** (as of 10/16/2018)

- ACCUMULATOR
 - CRIMPER
 - CYLINDER

 - PUMP
 - REGULATOR
 - SEAL
 - SENSOR
 - TUBING/PIPING
 - VALVE

d. Order Line BOM

An OrderLineBOM has specific fields associated with it and must be setup in the correct order. These are the individual components that comprise the order line item part.

Field Name	Type	Max Length (Value)	Optional	Comments
OrderNumber	String	25		
OrderReleaseNumber	String	8		
OrderLineNumber	String	8		
OrderLineNumberSeq	String	8		Padded with zeroes (3) 1 will be 0001
ComponentSequenceNumber	String	4		
ComponentPart	String	35		
Quantity	Integer			
UOM	String			"in", "mm", "pc", or ""
SubPTSID	String	8	YES	NOT USED ANYMORE
ReplaceDate	Date	10	YES	NOT USED ANYMORE
QCCode	String	50	YES	

i *This section is not required*

e. Order Line Comments

An OrderLineComments has specific fields associated with it and must be setup in the correct order. These are additional instructions or comments for the individual line item. The following fields are listed below.

Field Name	Type	Max Length (Value)	Optional	Comments
OrderNumber	String	25		
OrderReleaseNumber	String	8		
OrderLineNumber	String	8		
OrderLineNumberSeq	String	8		Padded with zeroes (3) 1 will be 0001
ComponentSequenceNumber	Integer	4		
Comment	String	250		Import will parse this into individual comments in PTS.

i *This section is not required*

f. Order Line Alternate Data

Field Name	Type	Max Length (Value)	Optional	Comments
OrderNumber	String	25		
OrderReleaseNumber	String	8		
OrderLineNumber	String	8		
OrderLineNumberSeq	String	8		
MfgrName	String	50		
PartNumber	String	60		
ProductLine	String	25		
Notes	String	255		
MfgrDate	date			CCYY-MM-DD

This section is not required

g. Order Line Alternate BOM

Field Name	Type	Max Length (Value)	Optional	Comments
OrderNumber	String	25		
OrderReleaseNumber	String	8		
OrderLineNumber	String	8		
OrderLineNumberSeq	String	8		
ComponentSeqNumber	String	4		
ComponentPart	String	35		
Quantity	Integer			
UOM	String	2		"in", "mm", "pc", or ""
QCCode	String	50	Yes	

This section is not required

h. Order Line Application Data

Field Name	Type	Max Length (Value)	Optional	Comments
OrderNumber	String	25		
OrderReleaseNumber	String	8		
OrderLineNumber	String	8		
OrderLineNumberSeq	String	8		
ComponentSeqNumber	String	4		
Location1	String	40	Yes	
Location2	Integer	40	Yes	
Equipment	String	20	Yes	
VinMachine	String	20	Yes	
AppInlet	string	2	Yes	01 = Port 02 = Filter 03 = Pump 04 = Valve 05 = Valve Manifold 06 = Motor 07 = Cylinder
AppInletDesc	String	50	Yes	

AppOutlet	String	2	Yes	01 = Port 02 = Filter 03 = Pump 04 = Valve 05 = Valve Manifold 06 = Motor 07 = Cylinder
AppOutletDesc	String	50	Yes	
Media	String	2	Yes	01 = Air 02 = Water 03 = Water Glycol 04 = Petroleum-Based Hydraulic Oils 05 = Phosphate-Based Fluids 06 = Gasoline 07 = Diesel Fuel 08 = Biodiesel 09 = LPG - Liquefied Petroleum Gas 10 = LNG - Liquefied Natural Gas 11 = CNG - Compressed Natural Gas 12 = Mineral Oils
MediaTemp	String	2	Yes	01 = -57°C-0°C (-70°F-32°F) 02 = 0°C-37°C (32°F-99°F) 03 = 38°C-68°C (100°F-154°F) 04 = 69°C-125°C (156°F-257°F) 05 = 151°C + (303°F +)
Environment	String	2 (2 character value)	Yes	01 = OUTSIDE 02 = OUTSIDE COMPARTMENT 03 = INSIDE 04 = INSIDE COMPARTMENT 05 = UNDERWATER 06 = HIGH ALTITUDE
EnvironmentTemp	String	2 (2 character value)	Yes	01 = -57°C-0°C (-70°F-32°F) 02 = 0°C-37°C (32°F-99°F) 03 = 38°C-68°C (100°F-154°F) 04 = 69°C-125°C (156°F-257°F) 05 = 151°C + (303°F +)
Pressure	String	2 (2 character value)	Yes	01 = 0-350 psi (0 - 24 bar) 02 = 350-750 psi (24 - 52 bar) 03 = 750-1500 psi (52 - 104 bar) 04 = 1500-3000 psi (104 - 207 bar) 05 = 3000-4000 psi (207 - 276 bar) 06 = 4000-6000 psi (276 - 414 bar) 07 = 6000-8000 psi (414 - 552 bar) 08 = 8000-10,000 psi (552 - 689 bar) 09 = 10,000+ psi (689+ bar) 10 = 10000-15000 psi (689 - 1034 bar) 11 = 15000-20000 psi (1034 - 1379 bar) 12 = 20000-25000 psi (1379 - 1724 bar) 13 = 25000-30000 psi (1724 - 2068 bar) 14 = 30000+ psi (2068+ bar)
CummulativeRuntime	String		Yes	NOT USED
CummulativeRuntimeCycle	String		Yes	NOT USED
Crit	String	1, 2 or 3	Yes	0 = Not Specified 1 = Low 2 = Medium 3 = High
Repair	String	00 or 01	Yes	00 = Shop 01 = Field

 This section is not required

- **Additional Notes**

- Asset management must be turned on for the account

i. Order Line Dynamic App Data

Field Name	Type	Max Length (Value)	Optional	Comments
OrderNumber	String	25		
OrderReleaseNumber	String	8		
OrderLineNumber	String	8		
OrderLineNumberSeq	String	8		
ElementID	String	4		The available elements are specific to products, the list will have to be requested.
ResponseText	String	75		
ResponseValue	String	75	Yes	(Dropdown Only) The available Response Value will have to be requested

i *This section is not required*

j. Order Line PTS Inbound

Field Name	Type	Max Length (Value)	Optional	Comments
OrderNumber	String	25		
OrderReleaseNumber	String	8		
OrderLineNumber	String	8		
OrderLineNumberSeq	String	8		
PTSID	String	8	Yes	Status Specific Logic A = Must be Valid PrePrint ID U = Must be Valid Standard ID C = Not Used X = Not Used

MfgDate	Date	10	Yes	CCYY-MM-DD
SerialNumber	String	30	Yes	
Warranty	String	25	Yes	
WarrantyExpireDate	Date	10	Yes	CCYY-MM-DD
WarrantyOrderNumber	String	50	Yes	
WarrantyType	String	25	Yes	
ReplacedPTSID	String	8	Yes	Status Specific Logic C = Must be Valid Standard ID U = Must be Valid Standard ID A = Must be Valid Standard ID
ReplacementReason	String	50	Yes	
RFID	String	24	Yes	
URLAttachments			Yes	SubSection Inside of OrderLineInbounds Repeat URL fields for each attachment
URL	String	1000	Yes	Must start with "http:\\\" or "https:\\\"
LinkText	String	500	Yes	
isPublic	String	5 (true or false)	Yes	Sets the attachment to be public or private

i This section is not required

• Additional Notes

• URL Attachments

- For multiple attachments, there needs to be multiple instances of the URLAttachments inside of the inbound

• Example:

```

<OrderLinePTSInbound>
<OrderNumber>1549246</OrderNumber>
<OrderReleaseNumber>001</OrderReleaseNumber>
<OrderLineNumber>001</OrderLineNumber>
<OrderLineSeqNumber>001</OrderLineSeqNumber>
<PTSID></PTSID>
<URLAttachments>

```

```

<URL>http://www.google.com</URL>
<LinkText>GOOGLE</LinkText>
<IsPublic>true</IsPublic>
<URLAttachments>
<URLAttachments>
  <URL>http://www.yahoo.com</URL>
  <LinkText>yahoo</LinkText>
  <IsPublic>true</IsPublic>
<URLAttachments>
</OrderLinePTSInbound>

```

k. XML Schema

1. Inbound

This is the schema is for General Order Interface.

http://phconnect.parker.com/pts_e/OrderInterface/PTSTOrderInterface2.xsd

```

<?xml version="1.0" encoding="UTF-8"?>
<xsd:schema xmlns:xsd="http://www.w3.org/2001/XMLSchema" id="PTSTOrderInterface2"

</xsd:schema>
```

• Additional Notes

- This XML Schema is subject to change (The PTS team intends to limit the number of changes to the XML schema; however, future enhancements may require changes).
- There can be multiple OrderLines in an order.
- There can be multiple OrderLineBOM in an OrderLine.
- There can be multiple OrderLineComments in an OrderLine.
- For orders where a line item is for a KIT, the sequence (seq.) can be used for multiple items with single line item.

2. Outbound

The following is an example schema that will be replayed as a parameter from the web service. This replay is only sent if the Response values in the Order Header must both be set to true. The outbound transaction will include all PTS IDs generated by the auto-print function.

```
<?xml version="1.0" encoding="UTF-8"?>
<xsd:schema xmlns:xsd="http://www.w3.org/2001/XMLSchema" id="PTSAutoPrintResponse"
  elementFormDefault="qualified">
  <!--
targetNamespace="http://phconnect.parker.com/pts_e/OrderInterface/PTSAutoPrintResponse.xsd"
  xmlns="http://phconnect.parker.com/pts_e/OrderInterface/PTSAutoPrintResponse.xsd"
  xmlns:mstns="http://phconnect.parker.com/pts_e/OrderInterface/PTSAutoPrintResponse.xsd"
-->
  <xsd:annotation>
```

```

```

Order Start

Status Determines what type of XML Order this is.
 A = Assign, used to assign preprinted IDs with no user interaction
 U = Update, used to update PTS IDs with no user interaction
 C = Create, used to create PTS IDs with no user interaction
 X = XML, used to save the XML file to be printed against at a later date by a user at a later date.

I: Test Web Service Page

- The TestWebService page is designed to give the developer the means in which to test their formatted xml interface data.
- By selecting Method 2 (FNS-Filter) and clicking Submit XML it will submit your current string, or if the page is blank it will generate a sample string for testing.
 - The testing process will require a valid <DataSource> value (*TESTING2*) and valid <AccountCode>.

1. Production Environment:

http://www.phconnect.com/pts_e/OrderInterface/TestWebService.aspx

Internet and Parker Intranet

2. Testing and Training Environment:

http://phctest.parker.corp/pts_e/OrderInterface/TestWebService.aspx

Parker Intranet
